

GONE GREEN

Phoenix Park's solar energy system is one of the largest renewable energy projects in Massachusetts. The installation of 2,530 rooftop and ground level panels is predicted to offset the facility's electrical load by approximately 40%. Phoenix Park has taken a number of additional measures in effort to "go green" with energy efficient windows, energy efficient HVAC systems, energy efficient lighting, maximum roof insulation, low flow plumbing fixtures, and waste stream recycling.

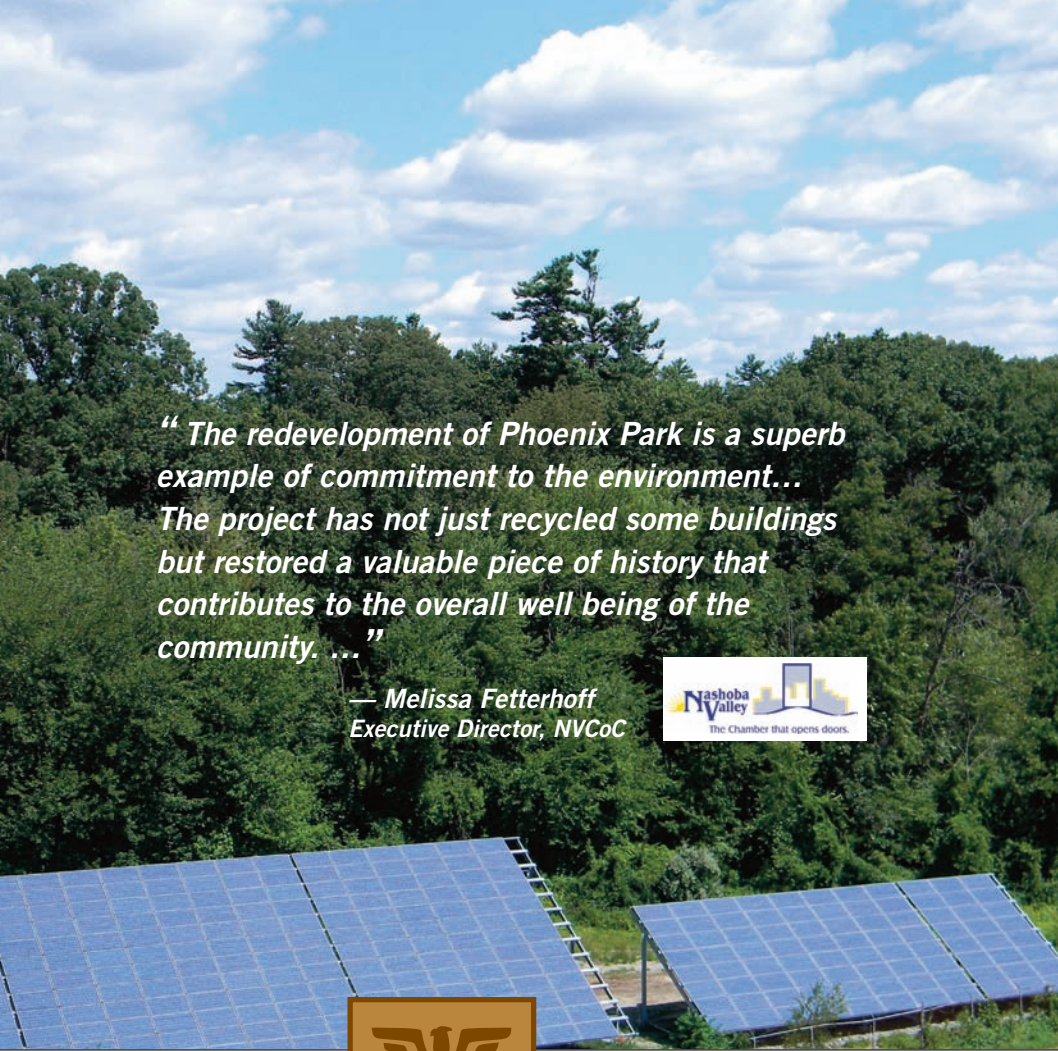

"The redevelopment of Phoenix Park is a superb example of commitment to the environment... The project has not just recycled some buildings but restored a valuable piece of history that contributes to the overall well being of the community. ..."

— Melissa Fetterhoff
Executive Director, NVCoc

Recipient of:

- 2010 EPA Merit Award
- 2010 NVCoc Executive Director's Award
- Freedoms Way Crystal Eagle Award
- 2009 NCMCoC Achievement Award
